

Certified Pumper Program Registration

Certification Form

The Certified Pumper Program is for companies to certify in writing that they properly pump, haul, and dispose of grease trap/interceptor waste for commercial and institutional food service establishments (FOG generators), and submit reports as required. Pumpers will demonstrate both initially and continually that they are able to meet the Certified Pumper Program criteria, as outlined below.

1. Pumpers must be properly licensed, insured, and bonded, and maintain proper contractor registration pursuant to RCW 18.27.
2. Upon registration, pumpers will provide LOTT with a list of food service establishments that they pump out on a regular basis.
3. Pumpers will satisfactorily pump out grease interceptors in accordance with LOTT cleaning standards.
4. Pumpers will provide LOTT with monthly reports including the following information:
 - Name and address of each location in the LOTT service area (Lacey, Olympia, and Tumwater) from which the grease pumper pumped the contents of a grease interceptor
 - Date(s) that the grease interceptor was pumped
 - Quantity of material received from each location
 - Any operational or structural deficiencies such as overflows, excessive corrosion, missing inlet/outlet baffles, or pipes such as sanitary tees and drop legs
 - Estimated percentages of grease and solid levels
5. Pumpers may submit monthly reports via hard copy or email, or they may enter data directly into LOTT's online system at www.onlinerme.com or www.bmpcomp.com/fog. Reports are to be received by the seventh day of the month following the service.
6. Upon written or verbal request from LOTT, the pumper will provide LOTT a minimum of 48 hours notice of the next scheduled pump-out for a specific facility so that LOTT staff may be present to assess the structural integrity of the empty grease interceptor.
7. Pumpers will satisfactorily dispose of pump-out waste in accordance with all applicable local, state, and federal regulations. Pumper decanting or stacking is never permitted. Decanting or stacking is the practice of returning wastewater from a grease hauler truck back into the grease interceptor or directly to the sewer after it has been pumped out.
8. The pumping company is responsible for updating this registration with any new contact, signatory, authorized representative, or waste disposal site information within 10 days or be removed from the Certified Pumper Program until updated information is received.
9. Failure to meet the above criteria and program standards may result in removal from the Certified Pumper Program registry.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Name _____ Company Name _____

Requests to be a Participant in the LOTT Clean Water Alliance Certified Pumper Program. As a Participant in this program, our company certifies that we will meet all of the above listed criteria.
