North Pipeline Upgrades

Project

This work will gather information to support LOTT Clean Water Alliance's (LOTT) planned replacement of a large portion of the North Pipeline. This pipeline transports clean treated water from the Budd Inlet Treatment plant to the marine outfall.

Project Benefits

Replacing this infrastructure will help ensure LOTT can meet future capacity needs and continue protecting public health and the environment.

Timeline

Additional final round of soil borings were done Sept 12- Sept 17, 2026 to verify ground contamination levels. Specific locations are depicted in the aerial photo.

Anticipated Impacts

Construction is scheduled to begin in 2030. Traffic will be limited to one lane and flaggers will be in place to control traffic. Please be alert and cautious when driving through this area. Thank you for your patience.

Additional Information

For further information or comments, please contact a LOTT representative:

- Brian Topolski, Project Manager | 360.528.5703
- Fred Hicks, Construction Manager | 360.918.3603
